PRO AUDIO & STUDIO

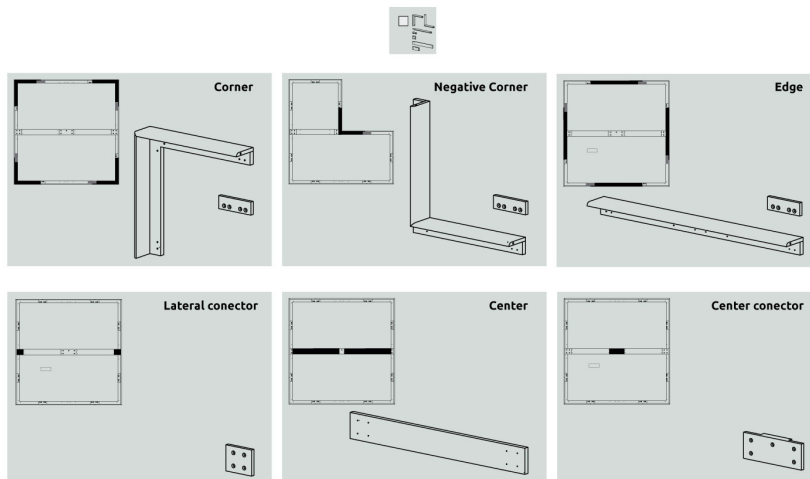

Specifications

FixArt Frame Components:
Corner
Negative Corner
Edge
Lateral Connector
Center
Center Connector

FixArt Frame is designed to hide the panel foam and fixing systems – adding the final touch to installation. The frame is modular – allowing to make any given size of array from a small range of components. The frame is pre-drilled with the positions of our FixArt Tube system – simplifying and speeding up installation, whilst also drastically reducing wall screws. Although the closed frame does more than that – the dorsal closed volume considerably boosts acoustic absorption performance.
